

# MANUSCRIPTS BEING ACCEPTED FOR *The Journal of ECT*

**The Journal of ECT** is an international journal that aims at a greater understanding of the effects of induced seizures on behavior and organ systems, both in animals and in humans, and of seizures, their mode of induction, their occurrence, and their propagation. The Journal is a forum for original scientific articles, reviews, commentaries, and letters.

The scope of articles may be broad, encompassing anatomic, structural, physiologic, biochemical, psychologic, and neurophysiologic studies of the effects of seizures and of the seizure process itself. The journal is also interested in related stimulation therapies such as transcranial magnetic stimulation (TMS), vagus nerve stimulation (VNS), and deep brain stimulation (DBS). Discussions of sociologic, legal, and ethical aspects of research and clinical practice are also of interest.

The Editors believe that the Journal can make a special contribution to clinical practice by providing a clinical forum for the reporting of both basic and clinical research into the convulsive therapy process. Rapid communications of new information are welcomed.

Manuscripts should be submitted online at <http://www.editorialmanager.com/ject>

To contact the journal with questions about the submission process or the publication of your paper, please email [Emily.Senerth@wolterskluwer.com](mailto:Emily.Senerth@wolterskluwer.com)
