Physical activity (PA) offers numerous health benefits in young children. Comparing childcare programs in Michigan, USA, it was found that although licensed centers are regarded as higher quality, home-based programs have many PA-promoting features, despite being rated as lower quality than licensed centers. Both programs provided comparable outdoor and television times, but home-based programs had better PA-promoting traits. An electronic survey was used to gather data on respondent/program characteristics, outdoor and indoor environment, and barriers to promoting physical activity. Clevenger et al. (2022) in Translational Journal of the American College of Sports Medicine. DOI: 10.1249/TJX.0000000000000198.
