[Supplementary Document 1: Detailed summary of search strategies](#)

[Supplementary Table 1: Alvimopan Evidence](#)

Supplementary Table 2: Peri-operative Pain Management Evidence

[Interventional Studies](#)

[Observational Studies](#)

[Systematic Reviews and Meta-analyses](#)

[Previous Guidelines and Recommendations](#)

[Aggregate Grading](#)

Supplementary Table 3: Peri- and Post-operative Fluid Management Evidence

[Interventional Studies](#)

[Observational Studies](#)

[Systematic Reviews and Meta-analyses](#)

[Supplementary Table 4: Peri-operative Nausea and Vomiting Evidence](#)

[Supplementary Table 5: Peri-operative Surgical Site Infection Evidence](#)

[Supplementary Table 6: Surgical Approach Evidence](#)

[Supplementary Table 7: Peri-operative Drain and Nasogastric Tube Usage Evidence](#)

[Supplementary Table 8: Enhanced Recovery Protocol Milestones Evidence](#)

[Supplementary Table 9: Impact of Prehabilitation Evidence](#)

[Supplementary Table 10: Preoperative Order Sets Evidence](#)

[Supplementary Table 11: Impact of Preoperative Stoma Education Evidence](#)

[Supplementary Table 12: Impact of Preoperative Nutrition and Bowel Preparation Evidence](#)

Supplementary Table 13: Postoperative Patient Mobilization Evidence

[Impact of Increased Postoperative Ambulation and/or Physical Activity as an Isolated Intervention on Outcomes](#)

[Association between Mobilization and Outcome- Observational Studies](#)

[Amount of Mobilization in Enhanced Recovery Protocols vs Traditional Care](#)

[Barriers and Enablers of Mobilization](#)

[Patient Mobilization Previous Guidelines](#)

[Supplementary Table 14: Early Postoperative Diet Evidence](#)
