Obstetrics and Gynecology Resident Interest and Participation in Global Health

Amy R. Stagg, MD, May Hsieh Blanchard, MD, Sandra A. Carson, MD, Herbert B. Peterson, MD, Erica B. Flynn, MS, MBA, and Tony Ogburn, MD

(Obstet Gynecol 2017;129:911–7)

1. Is an obstetrics and gynecology global health opportunity available at your center or institution? Describe this opportunity. Are you aware of any other global health experiences?

2. Identify the primary objective of the study. What study design was used? What features of the study support your selection of the study design?

3. Review the survey questionnaire (see Figure 1 in the article). Discuss its strengths and limitations. What changes would you make, if any?

4. Identify the survey response rates and discuss how they influence your confidence in the study results.

5. Review the data in Table 1 in the article and discuss whether or not they represent what you expect for the study population.

6. Summarize the primary findings of the study (see Tables 2 and 3 in the article). How would you address potential confounding in the characteristics examined in Table 3?

7. Based on the study findings, discuss whether or not obstetrics and gynecology programs should arrange formal global health opportunities.
