The *Journal of Addictions Nursing* is seeking papers for a special issue focused on the current risks and perceived benefits of non-combustible tobacco and cannabis use among all population groups. Although the initial impetus for introduction of e-cigarettes in the US was “billed” as a new mechanism to help people quit smoking cigarettes, the evidence to support this assertion is still lacking and remains controversial. Despite the recent crackdown on sales and marketing practices of e-cigarette makers by the Food and Drug Administration, adolescent use has increased by 75% in the past year. The *Wall Street Journal* reports that 20% of high-school students now use these products (WSJ, October 15, 2018, B5). Since we know that the risk for adult addiction to tobacco products usually begins in adolescence and young adulthood, this monumental rise in e-cigarette use constitutes a new national substance use crisis. Also, apparent, is the associated and or concomitant use of e-cigarettes to deliver cannabis and other drug products, especially in high risk populations such as teens and pregnant women. Papers for this special edition should focus on how nurses in all clinical settings can increase consumer knowledge about the risks and dangers of non-combustible nicotine and cannabis use, suggest new strategies to impact public policy related to access, safety, and marketing of these products, and discuss mechanisms to prevent and treat this addiction, especially in high risk groups.

Potential topics for papers includes:

- Health consequences of electronic nicotine (and cannabis) delivery systems, especially in high risk populations.
- Public health consequences of second hand vapor exposure.
- Evidenced based science to support the use of Electronic Nicotine Devices (ENDS) in smoking cessation treatment.
- Vaping of nicotine and cannabis as a gateway to addiction.
- Neurobiological and behavioral influences of vaping as a drug delivery system.
- Perceptions of vaping through provider and consumer lenses.
- Impact of the FDA’s recent crackdown on flavored e-cigarettes.
- Global issues and advocacy related to smoking cessation, use of ENDS products, and public health concerns.

Guest editors for this issue are **Nancy Campbell-Heider, PhD., NP-C, CARN-AP, FAANP, FIAAN, FAAN, Diane Snow, PhD, RN,, PMHNP-BC, FAANP, FIAAN and Carolyn Baird, DNP, MBA, RN-BC, CARN-AP, CCDPD, FIAAN**
See Instructions to Authors for guidelines on manuscript preparation and formatting at journals.lww.com/jan/pages/default.aspx; Authors should submit original papers for review at: http://www.editorialmanager.com/jan/. Inquiries should be sent to Christine Vourakis, Editor at cvourakis@csus.edu.
