

## Call for Papers

The *Journal of Addiction Medicine* is soliciting papers on issues related to fentanyl exposure in persons who are using opioids, illicit or prescribed. This may include unique features or consequences of fentanyl exposure (such as the fentanyl withdrawal syndrome), predictors or correlates of use, the use and/or challenges of medications for opioid use disorder (OUD) or other treatments for persons who are fentanyl-exposed, and/or features of overdose experience or risk that are unique to fentanyl exposure (e.g., wooden chest syndrome). The journal also has an interest in papers describing the pharmacokinetics of chronically ingested fentanyl and fentanyl analogs. There is particular interest in reports regarding buprenorphine, methadone, and/or extended-release naltrexone induction/initiation regimens and unique treatment strategies and outcomes. Both original research and narrative and systematic review articles will be considered. To be considered for this special collection, potential authors should submit an outline to the editorial office for approval before submitting a manuscript. The outline can be sent to [JAMReviewOutline@gmail.com](mailto:JAMReviewOutline@gmail.com). Please copy [marends@scripps.edu](mailto:marends@scripps.edu). The editors will provide feedback on the outline and a recommendation regarding whether to write and submit a manuscript.
