What content is Medicine® looking for in the area of endocrinology?

“The area of Endocrinology mostly deals with chronic conditions like Obesity, Diabetes, Pituitary, Adrenal, and Thyroid disorders that need long-term surveillance and a multifaceted approach in their management. Therefore, there is a pressing need for research studies that focus on newer diagnostic techniques (e.g. Imaging of receptor expression, machine learning application in pituitary diseases, etc.) as well as evaluate newer treatments including Precision Therapies. Last but not the least, qualitative research directed to patients’ outcomes (e.g. patients’ satisfaction and quality of life parameters) is the need of the hour and is likely to translate into better patient care.”

What advice would you give to researchers looking to publish their work in Medicine®?

“Newer researchers need to plan and implement such research studies, outcomes of which are directly applicable in the clinical practice, thereby causing a direct impact on the current diagnosis and management. The journal appreciates and would positively consider diligent research work performed by the investigators while upholding high ethical standards and a patient-centric approach.”
