What content is Medicine® looking for in the area of gastroenterology and hepatology?

“Medicine®, as the name implies, considers a broad scope of content in the medical field. We are looking for manuscripts describing new developments in diagnostics and management of various diseases and clinical conditions. We have a special interest in novel designs for example application of artificial intelligence.”

What advice would you give to researchers looking to publish their work in Medicine®?

“Getting published is key to improving your CV. It gives you a chance to share your own ideas and work as well as educate your peers.

It is important to realize that getting published is not easy. Once established as an expert, the road to get a manuscript accepted is much less bumpy. Being known may lead to invited manuscripts, a professional honor many dream of.

A good manuscript consists of two parts — an enticing topic of solid scientific content and the art of writing. The latter is often neglected, and many good manuscripts may be rejected because they are poorly written and results are not clearly presented. Writing is an art, and I advise to practice and practice again and seek mentors who can critique your work and help to improve it.”
