Advice from the Editors: Pulmonology

Pulmonology Section Editor:
Davor Plavec, MD, MSc, Ph.D.
Srebrnjak Children’s Hospital
Croatia

What content is Medicine® looking for in the area of pulmonology?
“Medicine® is looking for original articles and reviews that are prepared according to current publishing guidelines (www.equator-network.org) that are of interest mainly for the broad community of physicians and not only for pulmonologists. Our main focus are the most common chest disorders; diagnostic and treatment options and interventions in those disorders. Early diagnosis of chronic chest disorders is also of special interest with procedures that can be done on the primary care level or are of interest also for other physicians.”

What advice would you give to researchers looking to publish their work in Medicine®?
“Be innovative, enthusiastic, and open minded, but it is also important to closely follow the methodological principles of both scientific research and scientific writing. Consult experienced writers and prepare the manuscript using the help of the native English speakers or a professional service. Use publishing guidelines (www.equator-network.org) for your type of study. Present your data in a way that it clearly shows the idea behind the research work and prepare practical advice based on the results. Be critical towards your own work and present clearly all possible biases in the Limitations of the study paragraph so that it is easy for reviewers to follow your line of thoughts. Base your conclusions only on data done in your research (don’t speculate).”
