One Health Bulletin is calling for submissions to our Collection (Special Issue) on “Biomedical research in health science”.

We encourage researchers and scientists working in the areas of environmental microbiology, biotechnology, biomedicine, and related fields to probe into these issues with One Health perspective and approach, and submit their original research papers.

The Special Issue invites contributions, including but not limited to:
• Microbial contributions to diagnostics and therapeutics
• Microbes' role in disease prevention and personalized medicine
• Ethical and regulatory dimensions of biomedicine
• The role of microbial communities in human, animal, and environmental health
• Impact of environmental changes on zoonotic disease transmission: A One Health perspective
• Development of novel biotechnological methods for assessing and managing disease risks in the context of One Health
• Environmental factors influencing the spread of vector-borne diseases: A One Health approach
• Biotechnological approaches for the surveillance and control of emerging infectious diseases

Papers could be submitted via [https://review.jow.medknow.com/ohbl](https://review.jow.medknow.com/ohbl), in the first page of which, it needs to be stated clearly that the manuscript is submitted for the collection (Special Issue). All submitted papers will be peer-reviewed by a panel of experts in the field, and accepted papers will be presented at the conference and published in the conference proceedings.

The editorial office of One Health Bulletin is looking forward to the vibrant academic exchanges among our authors, and promises to process every manuscript with top priority.
