Physical, Emotional/Behavioral, and Neurocognitive Developmental Outcomes From 2 to 4 Years After PICU Admission: A Secondary Analysis of the Early Versus Late Parenteral Nutrition Randomized Controlled Trial Cohort

- "Most physical, emotional/behavioral, and neurocognitive defects...did not show improvement from 2-4y after PICU discharge, with several deficits even aggravating over time."

- "Impaired growth in height, executive functioning, and intelligence further aggravated and harm evoked by early-PN only partially recovered."
