Facial aesthetics and rejuvenation are evolving rapidly in an environment of developing products, procedures, and patient demographics. Clinicians benefit from ongoing guidance on products, tailoring treatments to individual patients, treating multiple facial areas, and using combinations of products and ways to optimize outcomes. In his discussion of the first article, Dr. Fagien offers insight on how to combine in-depth knowledge of facial aging, anatomy, product knowledge, and delivery techniques in order to obtain optimal aesthetic outcomes and duration of the aesthetic effects for cosmetic procedures.

In his review and update of the second article, Dr. Fagien combines his own clinical experience with up-to-date studies to discuss collagen, hyaluronic acid, poly-L-lactic acid, calcium hydroxyapatite, and polymethylmethacrylate filler products. It is critical to understand the unique profile of each filler product in order to provide patients with best results. Commentary on new products, updates to existing products, and advanced techniques in applying them round out the video discussion.
