Call for Papers
Disparities in Cancer Rehabilitation

Rehabilitation Oncology seeks high quality papers related to disparities in cancer rehabilitation and cancer care for a January 2023 special issue. The COVID-19 pandemic resulting from the novel coronavirus highlights the health disparities in America. Gaps in access, quality, and affordability of health care are documented in relation to survival rates, but less is known about the impact of disparities on disabilities and cancer survivorship. We are particularly interested in manuscripts that:

- Establish the current state of cancer care for minoritized or marginalized groups
- Identify barriers to cancer rehabilitation services that are specific to minoritized or marginalized groups
- Highlight effective interventions or strategies to reduce disparities.

We invite original research including systematic reviews, clinical trials, and secondary analyses as well as perspective papers examining health disparities in cancer rehabilitation. Manuscripts should identify barriers to care as well as have the potential to address potential short- and long-term solutions.

Interested authors are asked to submit a proposal for consideration to this issue by March 1, 2022. Additional information can be found at rehabonc.com. Please contact guest editors Lisa VanHoose, PT, PhD (vanhoose@ulm.edu) or Bernadette Williams York, PT, DSc (yorkbern@uw.edu) for questions or if you are interested in submitting to the special issue.
